SECTION 1 INTRODUCTION

This Annual Report has been prepared to meet the requirements of Condition IV.L of the Administrative Consent Order between the State of Maryland Department of the Environment (MDE) and Black & Decker (U.S.) Inc. (April 1995) (Consent Order) and the Addendum to Administrative Consent Order dated 29 June 1995. Specifically, Condition IV.L calls for preparation of an Annual Report containing a summary of the information contained in the Discharge Monitoring Reports (Table 2-3), a summary of all analyses of water samples (Tables 2-4 to 2-7), an explanation of all problems encountered and the manner in which they were resolved (Table 3-1), a performance evaluation of the treatment system (Section 4), and recommendations for continuation of, or changes to, the treatment system (Section 5). This document is one of several which are being prepared in response to the Consent Order; each of these documents are to be submitted to the MDE in accordance with the schedule outlined in the Consent Order. Final versions of the documents are to become part of the Administrative Record for the site which is to be maintained at a public repository in the town of Hampstead.

SECTION 2
SITE CHARACTERISTICS

2.1 HYDRAULIC PROPERTIES

In accordance with the Consent Order and the Water Appropriation Permit issued to the Black and Decker (U.S.) Inc. Hampstead, Maryland facility, the following pumping and water level information is included for the period of July 1995 through June 1996.

Pumping records showing the total gallons pumped per month of treatment system operation are presented in Table 2-1. Copies of the Withdrawal Reports, for the periods of July through December 1995 and January through June 1996, are included in Appendix A.

Water levels (Water Level Monitoring Report) for wells included in the water level monitoring plan are presented in Table 2-2. Based on the May 1996 water levels, a representative groundwater elevation contour map showing the potentiometric surface under pumping conditions is presented in Figure 2-1. At the time the data was collected, the extraction wells were pumping at a combined rate of approximately 170 gpm.

2.2 EFFLUENT CHARACTERISTICS

Effluent characteristics of the NPDES discharge points are recorded monthly on Discharge Monitoring Reports (DMRs) and are submitted to MDE, Water Management Administration, on a quarterly basis. A summary of the sample results from the DMRs is presented in Table 2-3. DMRs for the period of July 1995 through June 1996 are included in Appendix B.

Table 2-1
Treatment System Pumping Records
(July 1995 through June 1996)

Black & Decker
Hampstead, Maryland

Date	Water Pumped (gallons)
July 1995	7,103,793
August 1995	7,044,689
September 1995	6,639,325
October 1995	6,699,531
November 1995	6,075,298
December 1995	6,725,716
January 1996	6,607,400
February 1996	5,960,999
March 1996	6,962,621
April 1996	6,575,450
May 1996	7,581,928
June 1996	7,191,904

2.3 GROUNDWATER QUALITY DATA

A summary of groundwater analytical results for the third and fourth quarters of 1995 and the first and second quarters of 1996 are included in Tables 2-4, 2-5, 2-6, and 2-7, respectively. Analytical data packages for the second quarter of 1996 are included in Appendix C. Analytical data packages for the remaining quarters are included in the respective Quarterly Groundwater Monitoring Reports.

For the reporting period of July 1995 through June 1996, approximately 1175 lbs of total VOCs were removed from the groundwater. In general, the total VOCs were comprised of TCE (82%), PCE (17%), and a small percentage of 1,2-Dichloroethene and 1,1,1-Trichloroethane.

In general, the volatile organic compounds (VOCs) detected in the highest concentrations were trichloroethene (TCE) and tetrachlorethene (PCE). Those compounds detected at lower concentrations are 1,2-dichloroethene, 1,1,1-trichloroethane, 1,1-dichloroethene, and 1,1,2-trichloroethane. The remainder of VOCs present were detected at levels well below the Federal Maximum Concentration Levels (MCL).

As found in earlier sampling events at the Black & Decker facility, the highest concentrations of TCE are found on the eastern half of the Black & Decker facility in monitor well RFW-16. The highest concentrations of PCE were found in the vicinity of recovery well EW-9.

SECTION 3
OPERATION AND MAINTENANCE OF THE TREATMENT SYSTEM

A summary of the maintenance activities which were undertaken with the extraction and treatment system during the reporting period (July 1995 through June 1996) is provided in Table 3-1. This table is comprehensive in summarizing significant maintenance events or activities, while not including those activities considered unworthy of note (such as replacement of light bulbs, lubrication of moving parts as appropriate, or other routine activities).

Table 3-1
Treatment System Maintenance Activities (July 1995 through June 1996)
Black & Decker
Hampstead, Maryland

Date	Event	Corrective Action
October 1995	EW-6 shutdown.	Replaced ground in EW-6.
October 1995	EW-6 shutdown.	Replaced ground and rewired EW-6 to prevent future occurrence.
November 1995	EW-4 shutdown due to decreased flow.	Planning to install low level switch during 1st quarter 1996, as soon as weather permits.
November 1995	Blower # 2 shutdown.	Replaced sail switch on blower # 2.
November 1995	EW-5 shutdown.	Rewired EW-5.
January 1996	EW-3 shutdown.	Checked electrical connections; removed pump. Determined a broken pump shaft and ordered a new pump and motor.
February 1996	EW-3 operational.	Replaced EW-3 pump.
February 1996	Bad mechanical seal in air stripper pump.	Replaced seal and new shaft in P-12 pump at air stripper.
February 1996	EW-4 operational.	Installed new pump and low level switch.
June 1996	Remove temporary air emission control for air stripper.	Fiberglass gas pipe removed from side of stripper. Electric heater and carbon filters taken out of service.

SECTION 4
TREATMENT SYSTEM PERFORMANCE EVALUATION

During the reporting period of July 1995 to June 1996, water levels were on a monthly basis. Each month, water levels are evaluated to determine if an effective capture zone is maintained. Pumping rates are adjusted, as necessary, to ensure hydraulic control across the site without excessive drawdown. Significant drawdown has been observed in both shallow and deeper monitor wells throughout the long-term pumping of the extraction well system, indicating that considerable interconnection exists between the shallow and deeper groundwater.

As evidenced by the groundwater potentiometric surface contour map (see Figure 2-1), groundwater flow is still principally to the southwest, with some components to the south and east. However, depressions in the potentiometric surface, due to the pumping of the extraction wells, are evident on the map and the flow lines indicate that direction of groundwater flow is toward the extraction wells. The system as presently configured is successful in meeting the objective of capture of groundwater flow on site, prohibiting the potential off site migration of contaminated groundwater. The system is also successful in treating the collected groundwater to remove the VOCs from the water. The treated discharge does not show the presence of VOCs.

SECTION 5
RECOMMENDATIONS

As discussed in Section 5, the treatment system has created a hydraulic boundary preventing off-site migration of groundwater. Operation of the extraction system as currently configured will continue, adjusting pumping rates as necessary according to the amount of groundwater recharge. Operation of the treatment system as currently configured will also continue, because the treatment system is fully effective in removing VOCs from the extracted groundwater.

Dear Permittee:

As a condition of your Maryland Water Appropriation and Use Permit you are required to report your water withdrawal every six months. Complete and return this form no later than January 31, 1996. If you have any questions concerning this form, please telephone the Water Rights Division at (410) 631-3591.

1995 SEMI-ANNUAL GROUND WATER WITHDRAWAL REPORT

1. Check the method used to determine your withdrawal amounts:
(X) Flow Meter () Elapsed Time Indicator
() Other (Explain)
2. Enter the number of gallons of water withdrawn for each month.
- If you have multiple intakes under this permit, please add together the monthly totals for all intakes.
- Do not list continuous meter readings, hours pumped, or gallons in mgd.
- Indicate a "0" for each month with no withdrawal.

LIONVILLE LABORATORY ANALYTICAL REPORT

Client : BLACK AND DECKER
RFW# : 9605L124

W.O. #: 02501-004-001-0000-00
Date Received: 05-08-96

GC/MS VOLATILE

The set of samples consisted of thirty-six (36) water samples collected on 05-06,07-96.

The samples and their associated QC samples were analyzed according to criteria set forth in SW 846 Method 8240 for TCL Volatile target compounds on 05-13,14,15,17,18,19,20-96.

The following is a summary of the QC results accompanying these sample results and a description of any problems encountered during their analyses:

1. The required holding time for analysis was met.
2. A non-target compound was detected in sample RFW-16.
3. Thirteen (13) samples required dilution because they contained high levels of target compounds.
4. All surrogate recoveries were within EPA QC limits.
5. All matrix spike recoveries were within EPA QC limits.
6. All blank spike recoveries were within EPA QC limits.
7. The method blanks contained the common contaminants Methylene Chloride and Acetone at levels less than the CRQL. The method blanks 96LVC099-MB1, 96LVC094-MB1 and 96LVC098-MB1 contained the target compound Chloromethane at levels less than the CRQL.

GLOSSARY OF VOA DATA

DATA QUALIFIERS

- U = Compound was analyzed for but not detected. The associated numerical value is the estimated sample quantitation limit which is included and corrected for dilution and percent moisture.
- J = Indicates an estimated value. This flag is used under the following circumstances: 1) when estimating a concentration for tentatively identified compounds (TICs) where a 1:1 response is assumed; or 2) when the mass spectral data indicate the presence of a compound that meets the identification criteria but the result is less than the specified detection limit but greater than zero. For example, if the limit of detection is 10 ug/L and a concentration of 3 ug/L is calculated, it is reported as 3J.
- B = This flag is used when the analyte is found in the associated blank as well as in the sample. It indicates possible/probable blank contamination. This flag is also used for a TIC as well as for a positively identified TCL compound.
- E = Indicates that the compound was detected beyond the calibration range and was subsequently analyzed at a dilution.
- D = Identifies all compounds identified in an analysis at a secondary dilution factor.
- I = Interference.
- NQ = Result qualitatively confirmed but not able to quantify.
- N = Indicates presumptive evidence of a compound. This flag is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It is applied to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the N code is not used.
- X = This flag is used for a TIC compound which is quantified relative to a response factor generated from a daily calibration standard (rather than quantified relative to the closest internal standard).
- Y = Additional qualifiers used as required are explained in the case narrative.

GLOSSARY OF VOA DATA

ABBREVIATIONS

- BS = Indicates blank spike in which reagent grade water is spiked with the CLP matrix spike solutions and carried through all the steps in the method. Spike recoveries are reported.
- BSD = Indicates blank spike duplicate.
- MS = Indicates matrix spike.
- MSD = Indicates matrix spike duplicate.
- DL = Suffix added to sample number to indicate that results are from a diluted analysis.
- NA = Not Applicable.
- DF = Dilution Factor.
- NR = Not Required.
- SP, Z = Indicates Spiked Compound.
