SECTION 1

INTRODUCTION

This Groundwater Monitoring Report has been prepared to meet the requirements of Condition IV.G of the Administrative Consent Order between the State of Maryland Department of the Environment (MDE) and Black & Decker (U.S.) Inc. (April 1995) (Consent Order). Specifically, Condition IV.G calls for preparation of a Groundwater Monitoring Report containing the following information for each reporting period: the quantities of groundwater pumped, treated, and discharged; the calculation of quantities of contaminants removed from groundwater; a summary of all sampling analyses; an explanation of all operational or other problems encountered, and the manner in which each problem was resolved; copies of all reports submitted to the Department of Natural Resources in conjunction with the Groundwater Appropriations Permit; and recommendations for changes to the Interim Groundwater Treatment System. This document is one of several which are being prepared in response to the Consent Order; each of these documents are to be submitted to the MDE in accordance with the schedule outlined in the Consent Order. This document will become part of the Administrative Record for the site which is maintained at the Hampstead Public Library.

SECTION 2

SITE CHARACTERISTICS

2.1 HYDRAULIC PROPERTIES

In accordance with the Consent Order and the Water Appropriation Permit issued to the Black and Decker (U.S.) Inc. Hampstead, Maryland facility, the following pumping and water level information is included for the period of October through December 1996.

Pumping records showing the total gallons pumped per month of treatment system operation are presented in Table 2-1. Monthly water levels for wells included in the water level monitoring plan are presented in Table 2-2. At the time the water level measurements were collected, the extraction wells were pumping at an average, combined rate of approximately 178 gallons per minute (gpm).

2.2 EFFLUENT CHARACTERISTICS

Effluent characteristics of the NPDES discharge points are recorded monthly on Discharge Monitoring Reports (DMRs) and are submitted to MDE, Water Management Administration, on a quarterly basis. A summary of the sample results from the DMRs is presented in Table 2-3. DMRs for the period of October through December 1996 are included in Appendix A.

2.3 GROUNDWATER QUALITY DATA

A summary of groundwater analytical results for November 1996 (fourth quarter) is included in Table 2-4. November 1996 analytical data packages are included in Appendix B. For the reporting period of October through December 1996, approximately 248 lbs of total volatile organic compounds (VOCs) were removed from the groundwater by the extraction and treatment system. In general, the total

Notes: U = Compound was analyzed for but not detected. Value shown is the method detection limit for quantification.

J = Indicates an estimated value.

B = Indicates that the analyte was found in the associated blank as well as in the sample.

DUP = Duplicate sample

NS = Not sampled

(2.5) = Dilution factor.

VOCs removed from the groundwater comprised of trichloroethene (TCE) (87 %), tetrachlorethene (PCE) (12 %), and a small percentage of 1,2-dichloroethene and 1,1,1-trichloroethane.

TCE and PCE were the VOCs detected at the highest concentrations in the groundwater samples collected from the extraction wells and monitor wells. As found in earlier sampling events at the Black & Decker facility, the highest concentration of TCE was found on the eastern half of the Black & Decker facility in monitor well RFW-16 and the highest concentrations of PCE were found in the vicinity of recovery well EW-9. VOCs detected at lower concentrations were 1,2-dichloroethene, 1,1,1-trichloroethane, 1,1-dichloroethene, and 1,1,2-trichloroethane. The remainder of VOCs present were detected at levels well below the Federal Maximum Contaminant Levels (MCL).

SECTION 3

OPERATION AND MAINTENANCE OF THE TREATMENT SYSTEM

No maintenance activities were undertaken at the extraction and treatment system during the reporting period (October through December 1996). Maintenance activities do not include those activities considered unworthy of note (such as replacement of light bulbs, lubrication of moving parts, as appropriate, or other routine activities).

SECTION 4

RECOMMENDATIONS

For the reporting period of October through December 1996, the treatment system continued to create a hydraulic boundary preventing off-site migration of groundwater. Operation of the extraction system as currently configured will continue, adjusting pumping rates as necessary according to the amount of groundwater recharge. Operation of the treatment system as currently configured will also continue, because the treatment system is fully effective in removing VOCs from the extracted groundwater.

LIONVILLE LABORATORY ANALYTICAL REPORT

Client : BLACK AND DECKER
RFW# : 9611L217

W.O. #: 02501-004-001-0000-00
Date Received: 11-14-96

GC/MS VOLATILE

The set of samples consisted of thirty-seven (37) water samples collected on 11-12,13-96.

The samples were analyzed according to criteria set forth in SW 846 Method 8240 for TCL Volatile target compounds on 11-22,23,24,25,26,27-96.

The following is a summary of the QC results accompanying these sample results and a description of any problems encountered during their analyses:

1. The cooler temperature upon receipt has been recorded on the chain-of-custody.
2. Sample TRIP BLANK was reanalyzed outside holding time (refer to statement #5). A copy of the Sample Discrepancy Report (SDR) has been included in this data package.
3. Non-target compounds were not detected in these samples.
4. Thirteen (13) samples required dilution(s) because they contained high levels of target compounds.
5. Fifteen (15) of one-hundred-seventy-one (171) surrogate recoveries were outside EPA QC limits. The associated matrix spike analyses of sample EW-6 fulfilled its reanalysis requirement. The other samples with out-of-limit recoveries were reanalyzed on 11-25,26,27-96 and reported.
6. All matrix spike recoveries were within EPA QC limits.
7. All blank spike recoveries were within EPA QC limits.
8. The method blanks contained the common contaminants Methylene Chloride and Acetone at levels less than 4x the CRQL.

GLOSSARY OF VOA DATA**DATA QUALIFIERS**

- U** = Compound was analyzed for but not detected. The associated numerical value is the estimated sample quantitation limit which is included and corrected for dilution and percent moisture.
- J** = Indicates an estimated value. This flag is used under the following circumstances: 1) when estimating a concentration for tentatively identified compounds (TICs) where a 1:1 response is assumed; or 2) when the mass spectral data indicate the presence of a compound that meets the identification criteria but the result is less than the specified detection limit but greater than zero. For example, if the limit of detection is 10 ug/L and a concentration of 3 ug/L is calculated, it is reported as 3J.
- B** = This flag is used when the analyte is found in the associated blank as well as in the sample. It indicates possible/probable blank contamination. This flag is also used for a TIC as well as for a positively identified TCL compound.
- E** = Indicates that the compound was detected beyond the calibration range and was subsequently analyzed at a dilution.
- D** = Identifies all compounds identified in an analysis at a secondary dilution factor.
- I** = Interference.
- NQ** = Result qualitatively confirmed but not able to quantify.
- N** = Indicates presumptive evidence of a compound. This flag is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It is applied to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the N code is not used.
- X** = This flag is used for a TIC compound which is quantified relative to a response factor generated from a daily calibration standard (rather than quantified relative to the closest internal standard).
- Y** = Additional qualifiers used as required are explained in the case narrative.

GLOSSARY OF VOA DATA

ABBREVIATIONS

- BS** = Indicates blank spike in which reagent grade water is spiked with the CLP matrix spike solutions and carried through all the steps in the method. Spike recoveries are reported.
- BSD** = Indicates blank spike duplicate.
- MS** = Indicates matrix spike.
- MSD** = Indicates matrix spike duplicate.
- DL** = Suffix added to sample number to indicate that results are from a diluted analysis.
- NA** = Not Applicable.
- DF** = Dilution Factor.
- NR** = Not Required.
- SP, Z** = Indicates Spiked Compound.

WESTON® Sample Discrepancy Report (SDR)

SDR #: 9647265

Initiator: Jack Glacken
 Date: 12/11/96
 Client: Black + Decker

RFW Batch: 9611L217
 Samples: -Q36
 Method: SW846/MCAWW/CLP/

Parameter: 0624H
 Matrix: Water
 Prep Batch: 7

1. Reason for SDR

- | | | | |
|--|---|--|---|
| a. COC Discrepancy | <input type="checkbox"/> Tech Profile Error | <input type="checkbox"/> Client Request | <input type="checkbox"/> Sampler Error on C-O-C |
| | <input type="checkbox"/> Transcription Error | <input type="checkbox"/> Wrong Test Code | <input type="checkbox"/> Other |
| b. General Discrepancy | | | |
| <input type="checkbox"/> Missing Sample/Extract | <input type="checkbox"/> Container Broken | <input type="checkbox"/> Wrong Sample Pulled | <input type="checkbox"/> Label ID's Illegible |
| <input checked="" type="checkbox"/> Hold Time Exceeded | <input type="checkbox"/> Insufficient Sample | <input type="checkbox"/> Preservation Wrong | <input type="checkbox"/> Received Past Hold |
| <input type="checkbox"/> Improper Bottle Type | <input type="checkbox"/> Not Amenable to Analysis | | |

Note: Verified by [Log-In] or [Prep Group] (circle)...signature/date:

c. QC Problem (Include all relevant specific results; attach data if necessary)

Sample analyzed in hold w/ Surrogate out
 Reanalyzed out of hold

2. Known or Probable Causes(s)

3. Discussion and Proposed Action

Other Description:

- Re-log
- Entire Batch
- Following Samples: _____
- Re-leach
- Re-extract
- Re-digest
- Revise EDD
- Change Test Code to _____
- Place On/Take Off Hold (circle)

Will report Both and narrate

4. Project Manager Instructions...signature/date:

DCS 12/11/96

- Concur with Proposed Action
- Disagree with Proposed Action; See Instruction
- Include in Case Narrative
- Client Contacted:
- Date/Person _____
- Add
- Cancel

5. Final Action...signature/date:

Mark M Taylor 12-11-96 Other Explanation:

- Verified re-[log][leach][extract][digest][analysis] (circle)
- Included in Case Narrative
- Hard Copy COC Revised
- Electronic COC Revised
- EDD Corrections Completed

When Final Action has been recorded, forward original to QA Specialist for distribution and filing.
